SUMMARY

I'm a software developer experienced in web and mobile application development. I work across the stack, combining frontend design, backend systems, and third-party cloud services to build solutions that are intuitive, reliable and help solve everyday problems. I also lead teams and mentor young, emerging developers, fostering growth and collaboration. For more information about me, check out my Personal Website at www.mohit-jain.com.

EXPERIENCE

iVue
Jan 2023 - Present

Lead Software Developer — Cumming, GA

- Defined company standards for web application development by mandating professional coding best practices, writing technical documentation, and creating training programs to help new developers build essential software development skills at iVue.
- Developed a full-stack single-page application called Worlds iVue, a web-based geospatial platform that is capable of connecting to and operating advanced drones and able to allow its users to create, publish, and sell media content such as professional photos, videos, etc. online. It utilizes Amazon Web Services such as Amazon Cognito for its user authentication services.
- Led the development of iVue's 5 main company websites, overseeing and personally contributing to its overall design, and improved website performance by lowering overall latency by 75% and improving search engine optimization with Google Analytics.
- Built Arduino systems for motor control and data communication and enabled reliable integration with drones and ground stations using the MAVLink Protocol.
- Mentored multiple interns in front-end development and development operations (DevOps) engineering by offering guidance and hands-on assistance on modern web development frameworks, responsive UI/UX design, Infrastructure as Code (IaC), and coding best practices.

Robins Air Force Base | 402nd Software Engineering Group
June 2026 - July 2026

Computer Science Intern — Warner Robins, GA

- Developed software, fixed errors, and created features for an electronic warfare system using the C programming language.
- Created a program that allows my team to automatically convert their Microsoft Word Documentation into more intuitive HTML files and send these files to their stakeholders with ease.
- Used Azure DevOps while to create pipelines for automation, manage Git repositories, and keep track of tasks.

KSU Immersive Visualization Environments Lab
Jan 2026 - May 2026

Student Assistant — Kennesaw, GA

- Developed a program that is capable of recording brainwave signals from humans, extracting the necessary data, and then feeding that data into an Artificial Intelligence (AI) Model.
- Contributed to a research paper published by the American Scholars Press focusing on the Applications of Generative AI.
- Assisted lab professors with teaching their classes that involved subjects such as Data Visualization.

EDUCATION

Kennesaw State University
Aug 2023 - Expected May 2027

Bachelor Degree in Computer Science — Kennesaw, GA

- **GPA:** 3.3
- **Coursework:** Programming Problem Solving, Database Systems, Software Engineering, Discrete Mathematics, Professional Practices and Ethics, Physics, Data Structures, Probability and Data Analysis, Operating Systems, Linear Algebra, Artificial Intelligence, Algorithm Analysis, Machine Learning, Machine Vision, Natural Language Processing

SKILLS

- **Languages And Frameworks:** Java, JavaScript, Node.js, HTML, CSS, SCSS, C, C#, C++, Vue.js, Nuxt, React, React Native, Angular, Vite, Vitest, Jest, Tauri, TypeScript, NodeJS, Python, GoLang, SQL, R
- **Tools And Platforms:** Amazon Web Services, Google Cloud, Git, GitHub, GitLab, GitKraken, NPM, Yarn, MAVLink Protocol, CesiumJS, Arduino, Azure DevOps, Google Colab, Jira
